

IT MIGHT BE TODAY

"Saint Alien"

If these are the last days, and if Bible prophecy is to be taken literally, then we ought to be able to look at the news and the trends in the world and see corroboration of the prophecies that are still awaiting fulfillment.

In the last decade there has been a resurgence of interest in UFO's and the prospect of alien life.

If you don't watch much educational television, you might be startled to learn that many mainstream scientists not only believe there is life out there, but that we have already been visited by aliens.

I'm surprised at how often the programs will cite a passage in the Bible and say the best explanation for it is that the writer witnessed an alien spacecraft. Ezekiel's visions are a favorite reference.

The Vatican seems to think so, too. I've reported several times before the interest that the Vatican Observatory has in alien life.

The Vatican Observatory Research Group (VORG) is officially headquartered at Castel Gandolfo, a fortified castle perched on the rim of an extinct volcano an hour outside Rome.

In the mid 1980s, the VORG decided to build its own telescope, a step that propelled this religious group to the very forefront of optical research and helped to usher in an astronomical revolution.

They're at it again.

FoxNews posted an article titled, *Vatican scientists co-host conference in Arizona seeking alien life in universe.*

Excerpts:

The ultimate question of life beyond Earth and the solar system takes center stage in a science conference led by the Vatican Observatory and a University of Arizona this week.

Nearly 200 scientists are attending the conference, called "The Search for Life Beyond the Solar System: Exoplanets, Biosignature & Instruments," which runs from March 16 through 21 in Tucson. The Vatican Observatory is co-hosting the conference with the University of Arizona's Steward Observatory.

Rev. Paul Gabor of the Vatican Observatory, the conference's... co-chair, [said] that scientists will give more than 160 research presentations during this week's conference.

According to the organizers, the conference will cover the technical challenges of finding and imaging exoplanets and identifying biosignatures in the atmospheres of far-flung worlds.

<http://www.foxnews.com/science/2014/03/17/is-alien-life-vatican-observatory-science-conference/>

An exoplanet or extrasolar planet is a planet outside the Solar System. Around 1800 such planets have been discovered.

A related story explains,

As of December 2012, the Habitable Exoplanets Catalog lists nine planets that have the best chance for life beyond our solar system. Not all of these planets are confirmed, and there's still a lot to learn about their environments. But the catalog gives astrobiologists a great place to start when talking about life beyond Earth.

The top candidate is Gliese 581G, about twenty light years away from our sun, and about three times as massive as the earth.

What is being attributed to aliens from other planets is none other than the activity of fallen angels. Demons and demonic possession are a far better answer to the UFO and alien question than, well, ET.

I suggest that the mainstream acceptance of aliens, who are just demons impersonating ET, is part of the massive deception the Bible predicts will occur among the human race after the church has been removed.

It's tragic that the Vatican is caught-up in the search. They ought to know better.

Jesus will return imminently to resurrect the dead believers of the church age, and that when He does He will also rapture living believers off of the earth. We will be changed in a moment, in the twinkling of an eye, and be transported to Heaven.

Perhaps that's when the so-called aliens will make their helpful, benevolent presence known, and somehow mask the spiritual effect of millions of believers being gone in the twinkling of an eye.

Are you ready for the rapture? If not, get ready, stay ready, and keep looking up. ***Ready or not, Jesus is coming!***
