

IT MIGHT BE TODAY

INTO THE CORTEX

Every Sunday we present a prophecy update. We show how news and trends in the world corroborate centuries-old prophecies you read in the Bible.

When the apostle John wrote the Revelation of Jesus Christ in the first century he spoke of a society in which each citizen would have some sort of a 'mark' on their body by which they would be uniquely identified to conduct business and contact the government.

Mid-way through the seven-year Great Tribulation, the man we know as the antichrist will take over that system and demand that his citizens swear allegiance to him. Those who refuse will not be able to conduct any business. At some point those who refuse will be persecuted.

Ours is the generation that has seen the technology developed that could fulfill this prophecy. They can put implants right in your brain now - or will be able to very soon. Right now these chips have important medical applications but I think we can speculate they could just as easily be implanted for other uses.

On July 31, Financial Times posted an article titled, *Health Care: Into the Cortex*.¹

Excerpts:

¹ <http://www.ft.com/intl/cms/s/0/487fb69e-db1f-11e1-8074-00144feab49a.html#axzz22UIIENGr>

... pharmaceutical [companies are] moving beyond conventional drugs that interact biochemically with the body [to build] a big “bioelectronics” business that treats disease through electrical signaling in the brain and elsewhere.

Neurological problems, from stroke and epilepsy to depression, will be treated through electronic implants into the brain rather than pills or injections. Even diabetes and obesity will be attacked in ways that seem like science fiction today, by sending electrical signals to malfunctioning cells.

According to another article² "stroke and Parkinson's disease patients may benefit from a controversial experiment that implanted microchips into lab rats. Scientists say the tests produced effective results in brain damage research."

In addition, the U.S. government has been working on implantable microchips that would monitor the health of our soldiers and enhance their abilities in the field.

The installation of a neural implant is relatively simple and fast. Under anesthesia, an incision is made in the scalp, a hole is drilled in the skull, and the device is placed on the surface of the brain. Diagnostic communication with the device can take place wirelessly. When it is not an outpatient procedure, patients typically require only an overnight stay at the hospital.

The technology to accomplish what John the apostle saw over two thousand years ago is here. Right now. It is only a matter of time before every citizen in every country all over the world has his or her own personal identifier on or in the body.

These are the last days and things are lining up just as God said they would!

Does anything need to happen before Jesus returns to resurrect and rapture the church? No. And that's why I like to end these updates by saying, Get ready, stay ready, keep looking up.

Ready or not, Jesus is coming!
