"ID Do"

Prophecy Update #609

Since we are living in what the Bible calls the last days, we believe we should be able to identify trends in the world that you'd expect from a literal, futurist reading of unfulfilled prophecy.

That is why we focus on Bible prophecy each week for about five-minutes, calling it a "Prophecy Update."

We try to not be sensational. We don't see prophecy in every earthquake or moon phase. We reference our comments with trustworthy sources.

We also try to be careful to point out that we are not claiming these trends to be the fulfillment of prophecy. They are things that seem to resonate with the Bible's yet to be fulfilled last days prophecies. Things you'd expect to be happening.

The yet future seven year Great Tribulation is predicted in the Old Testament, and described in detail in Revelation chapters six through nineteen. It will feature totalitarian control over citizens using some form of "mark" on them that sounds a great deal like biometrics.

I read an article titled, *Guyana to launch biometric national ID card, Portugal and Jamaica digital ID plans advance.*

Excerpts:

Guyana's government is planning to include biometrics among the security features of a new national ID card for use with all public services. Options for a

new national identification card are being considered ahead of its introduction to replace multiple different forms of identification currently used for services such as NIS pensions, tax payments, social security, immigration status and admission to schools, President David Granger says. The new credential is part of a broader civil registration reform.

“The establishment of the Department of Citizenship was intended to protect the rights of citizenship. Our citizenship policy is to ensure that every Guyanese citizen will be accounted for from birth to death, as far as technologically possible,” Granger stated at a recent event.

The article also mentioned that the government of Portugal is planning to launch a biometric facial recognition and liveness-backed digital ID for access to government websites,

A “digital Jamaica” is coming soon. Jamaica’s Ministry of Science, Energy and Technology has developed an eight-point plan to build out the country’s digital services.

Minister Fayval Williams suggests the government will complete its digitization project sooner than expected, and the average wait time of 4.3 hours or three different visits to a government office to complete a service will be replaced by processes which are far more efficient.

The use of public key infrastructure is expected to be completed in the next seven to eight months, easing issuance of biometric passports, digital ID cards, and the authentication of digital signatures.

No one is suggesting this is the “mark.” But since there will be a “mark” in the future, these trends in biometrics that trade privacy and autonomy for convenience are to be expected.

Jesus promised He'd return to rapture His church - which entails the resurrection of the dead in Christ of the Church Age, then the translation from earth to Heaven of all living believers.

It is presented in the Bible as an imminent (any-moment) event.

Are you ready for the rapture? If not, get ready, stay ready, and keep looking up. *Ready or not, Jesus is coming!*
